## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-14, drawn to fastener element having resilient securing structure, classified in class 411, subclass 508.
  - II. Claims 15-19, drawn to specific lamp mounting or retaining, classified in class 362, subclass 549.
  
2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because, invention II, a fascia assembly has a separate utility and can be used to releasably fasten a component to a housing. The subcombination has separate utility such as an attachment arm extending from an intermediate arm and defining a channel between the intermediate arm and a lower arm.

Art Unit: 2875

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
